Limit States Design

Notes:

1. Loads are based on Grade 230 steel conforming to ASTM A653 with a minimum yield stress of 230 MPa and a maximum stress under factored loads of 207 MPa.

2. Section properties are in accordance with CSA S136-12.

3. Values in row "S" are the maximum specified uniform loads based on strength which must be greater than the applied factored load.

4. Values in row "D" are the maximum specified uniformly distributed loads based on a deflection limit of L/180. The load in row "D" should not be used if it exceeds the load in row "S". The lesser value governs.

5. Reductions for web crippling have been included in the load table when they apply.
